For years, gas-powered leaf blowers have raised public concerns about the health and environmental impacts of noise, particulate pollution, erosion, and greenhouse gas emissions on workers, customers, and the environment.

Join Jamie Banks of Quiet Communities, Dan Mabe founder of American Green Zone Alliance, Brendan McCue, Strategic Sourcing Manager at the Commonwealth of Massachusetts' Operational Services Division and David Pinsonneault, Public Works Director for the Town of Lexington, for [a conversation via Zoom](#) about the benefits of shifting to electric-powered leaf blowers and equipment.

Learn about how other towns, schools and businesses have made the transition and what a shift to electric might look like for Wellesley. Sponsored by Sustainable Wellesley, and the Town of Wellesley's Natural Resources Commission and Sustainable Energy Committee. Have questions? Contact: info@SustainableWellesley.com.
